EXPERIENCE

[1] Tech Lead

- company: Motorista PX
- start: 2024-08
- end: present
- duration: 1 year 9 months
- location: Joinville, SC, Brazil
- description: Led a team of senior developers ensuring work organization, technical quality, and delivery predictability. Handled task prioritization and refinement in a Kanban flow. Participated in technical feasibility discussions and planning with the product triad (Tech, Product, Design), aligning deliveries, upcoming initiatives, and quarterly goals. Facilitated daily standups, removed blockers, and led retrospectives focused on continuous improvement. Conducted regular 1:1s using Nonviolent Communication principles, tracked individual growth metrics, and supported team members in both technical and leadership development paths.

[2] Senior Frontend Developer

- company: Motorista PX
- start: 2022-08
- end: 2024-08
- duration: 2 years 1 month
- location: Joinville, SC, Brazil
- description: Developed the carrier management panel for trips and truck driver hiring (Next.js, React, Tailwind). Built the homepage dashboard, contract form, and candidate profile analysis. Developed the mobile app for drivers to apply for trip catalogs using React Native and Expo — implemented truck inspection checklist, profile management screens with photo upload and experience declaration. Built PHP APIs consumed by the frontend. Created a Python server using Serverless, Docker, and AWS for third-party API integrations. Used Tesseract OCR to extract text from PDFs and convert it into structured data.

[3] Freelancer — Automation Processes

- company: Self-employed (Paulo Victor Duarte)
- start: 2022-02
- end: 2022-05
- duration: 4 months
- location: Joinville, SC, Brazil
- description: Developed API integrations with different systems in Node.js for LojaIntegrada. Created new HTML and CSS components using Google Tag Manager.

[4] Automation Analyst

- company: Pollux Automation
- start: 2020-07
- end: 2022-03
- duration: 1 year 9 months
- location: Brazil

- description: Developed the concept and implemented the standard program for palletizing robots. Created a Python application with an HTML graphical interface to extract data from the 3D simulator and convert it into robot machine language. The solution eliminated rework caused by the gap between simulation and real robot, accelerating programming delivery and reducing production errors.

[5] Internship — Automation Projects

- company: Pollux Automation
- start: 2020-02
- end: 2020-07
- duration: 6 months
- location: Joinville, SC, Brazil
- description: Internship in automation projects.

[6] Mechatronic Engineering Student / Academic Activities

- institution: UFSC Joinville
- start: 2013-01
- end: 2020-07
- duration: 7 years 7 months
- location: Joinville, Brazil
- description: Final thesis (TCC) on trajectory planning for anthropomorphic robots using C++ and Python with the ROS framework. Participated in advanced robotics projects. Served as Programming II Monitor (Data Structures and Search Algorithms).

[7] Technical Support

- company: Selbetti
- start: 2012-01
- end: 2013-06
- duration: 1 year 6 months
- location: Joinville, Brazil
- description: Worked as a printer technician, solving mechanical and electronic problems on laser printers. Automated processes to reduce printer report delivery time.

EDUCATION

[1] Bachelor's Degree — Mechatronics, Robotics, Control and Automation Engineering

- institution: Universidade Federal de Santa Catarina (UFSC)
- start: 2013-01
- end: 2020-11

[2] Computer Programming — Specific Applications

- institution: Rocketseat
- start: 2022-01
- end: 2023-01

[3] Leadership and People Management with Emphasis on Organizational Leadership

- institution: Fundação Getulio Vargas (FGV)
- start: 2025-03
- end: 2025-06
