Cover Letter

I'm Paulo Victor Duarte, a Senior Front-End Developer and Tech Lead based in Brazil. I have a background in Mechatronics Engineering, which shaped how I approach software by combining logic, systems, and automation.

I built most of my career at Motorista PX. On the web side, I worked on the dashboard used by transport companies to manage trips, contributing to the home page, contract form, and candidate analysis flow using Next.js, React, and Tailwind. On mobile, I developed the app used daily by drivers, including truck inspection checklists, photo uploads, and profile management, using React Native and Expo.

I also have full-stack experience. I've built PHP APIs for the frontend, worked with third-party integrations, and developed a Python server using Serverless, Docker, and AWS. I also worked with OCR using Tesseract to extract data from PDFs and make it usable for other teams.

Today, I work as a Tech Lead, leading a team of senior developers. My focus is to keep the work organized and predictable while giving the team autonomy. I structure the workflow using Kanban, participate in task refinement, and align closely with Product and Design on technical decisions.

In the day-to-day, I run short dailies, use post-daily sessions to unblock tasks, and run regular 1:1s using non-violent communication to support individual growth. I care about building a healthy environment where people can work with clarity and ownership.

At the end of the day, I like building useful things and helping the team move forward without friction.
