Paulo Victor Duarte

Tech Lead | Senior Front Engineer at MotoristaPX
Joinville, Santa Catarina, Brazil

Summary

I am a Mechatronics Engineer with a strong specialization in software development, working as a Tech Lead at Motorista PX. My experience includes strategic decisions in software architecture, definition of coding standards, and technical leadership in projects using technologies such as React, React Native, Node.js, Python, and AWS. I have a profile that combines technical and interpersonal skills, always aiming to motivate and develop my team to ensure a high-performance environment and professional satisfaction.

Experience

Motorista PX

3 years 9 months

Tech Lead

August 2024 - Present (1 year 9 months)

Tech Lead responsible for leading a team of senior developers, ensuring work organization, technical quality, and delivery predictability. I handle task prioritization and refinement in a Kanban flow, participate in discussions about technical feasibility, and support planning together with the product triad (Tech, Product, and Design), aligning deliveries, upcoming initiatives, and quarterly goals.

In my day to day, I facilitate team alignment through short daily meetings and use post-daily moments to help remove blockers and unblock tasks. I also lead retrospectives focused on continuous improvement, turning the points raised by the team into practical actions to improve processes and routines.

I have a strong focus on developing people on the team. I conduct regular 1:1s using principles of Nonviolent Communication, offering feedback, tracking individual growth metrics, and understanding each person's expectations, challenges, and goals. I adapt the way I conduct these conversations according to each individual's profile, creating a safe environment for open dialogue.

My leadership is based on example, trust, and collaboration. I strive to give the team autonomy while maintaining clear priorities and encouraging shared responsibility. I also support individual development, helping both those who want to deepen their technical skills and those interested in growing into leadership roles.

Senior Frontend Developer

August 2022 - August 2024 (2 years 1 month)

Joinville, Santa Catarina, Brasil

Motorista PX Website: I participated in the development of the panel used by the carrier to manage trips and hire truck drivers. My work included creating the dashboard for the homepage, the contract form, and analyzing the candidate's profile for the job vacancy. For this project, we used the Next.js, React, and Tailwind frameworks.

Mobile Application: I collaborated on the development of the mobile application that allows drivers to apply for the catalog of trips. I implemented important features, such as the checklist for truck inspection before and after trips, as well as the profile management screens, enabling drivers to upload photos and declare their experiences with supporting documents, among other resources. The application was built using React Native and Expo.

Full-Stack Tasks: In these activities, in addition to developing the website and the application, I used PHP to build APIs consumed by the frontend. In addition, I also worked on projects involving integration with third-party APIs, where I created a server in Python using Serverless, Docker, and AWS.

Artificial Intelligence: Additionally, I worked with artificial intelligence using Tesseract OCR to read texts in PDF and transform them into data to be used in other sectors of the company.

Paulo Victor Duarte

Freelancer in automation processes

February 2022 - May 2022 (4 months)

Joinville, Santa Catarina, Brasil

I developed API integrations with different systems in NodeJS for LojaIntegrada.

I also created new HTML and CSS components using the Google Tag Manager.

Pollux Automation

2 years 2 months

Automation analyst

July 2020 - March 2022 (1 year 9 months)

Brasil

During my time as an Automation Analyst at Pollux in Joinville, I was responsible for developing the concept and implementing the standard program for palletizing robots. For this project, I also created a Python application with a graphical interface in HTML, aiming to extract data from the simulator and convert it into the robot's machine language.

This solution brought significant benefits to the company as it greatly accelerated the delivery of robot programming. Previously, we faced rework due to the lack of connection between the 3D simulation and the robot. However, thanks to the application I developed, we can now extract all the movements the robot needs to perform directly from the simulation, without the need to manually perform this process on the robot.

This automation allowed for greater efficiency in the programming process of palletizing robots, reducing errors, and optimizing production time.

Internship in automation projects

February 2020 - July 2020 (6 months)

Joinville, Santa Catarina

UFSC Joinville

Mechatronic Engineering

January 2013 - July 2020 (7 years 7 months)

Joinville e Região, Brasil

- TCC in trajectory planning for anthropomorphic robots. The project was developed in C++ and Python with the ROS framework.
- Participation in advanced robotics projects.
- Programming II Monitor (Data Structure and Search Algorithms).

Selbetti

Technical support

January 2012 - June 2013 (1 year 6 months)

Joinville e Região, Brasil

I worked at Selbetti as a printer technician, learning to solve mechanical and electronic problems of laser printers.

I automated processes to reduce the delivery time of printer reports.

Education

Universidade Federal de Santa Catarina

Bacharelado, Mecatrônica, Robótica e Engenharia de Controle e Automação · (January 2013 - November 2020)

Rocketseat

Programação de Computadores - Aplicativos Específicos · (January 2022 - January 2023)

Fundação Getulio Vargas

Liderança, Gestão de Pessoas com Ênfase em Liderança Organizacional · (March 2025 - June 2025)
